

RIFF RAFF

MKII

The Riff Raff is a smooth and creamy asymmetrical silicon overdrive pedal. Fully detailed, rich and beefy tones render this pedal perfect for every style, depending on the amp and instrument you choose to pair it with, delivering the "mojo" of a vintage TS with a modern touch.

It features 2 separate channels **1 (Green) & 2 (Red)** which share a very versatile Tone control. Each channel can be selected using the left foot-switch. Channel2 features a dedicated gain boost switch with which you can have more gain and punch added to your tone, making it even more rounder and satisfying. You will find that, even in higher gain settings, the Riff Raff cleans up organically by lowering your pickup volume or by the dynamics of your playing!

The Riff Raff can be used as a stand alone overdrive pedal or as a booster to push an amp for extra bite and sustain.

Controls:

- VOL 1: Adjusts the volume of the 1st channel
- VOL2: Adjusts the volume of the 2nd channel
- DRIVE1: Adjusts the amount of gain for the 1st channel
- DRIVE2: Adjusts the amount of gain for the 2nd channel
- TONE: Adjusts the equ for both channels
- BOOST switch: A dedicated switch for Channel2. Select between normal and boost gain settings

Specs:

- Handmade in Athens, Greece
- True Bypass
- Asymmetrical silicon Dual Overdrive
- 1 Heavy Duty Foots-witch for enable / disable the pedal (right sided)
- 1 Heavy Duty Foot-switch for selecting between channel **1 (Green) & 2 (Red)** (left sided)
