

HUBBLE

The Hubble is a clean multi-purpose booster, starting from 0db up to +20db. Use it to stand out in the mix or add that extra "juice" to every note you hit!!!

A single FET stage is responsible for the warm and tube like tones, while the boost control adjusts the amount of extra volume added to the tone when the pedal is engaged. At high settings, the sound will start to saturate, like cranking up a clean tube amp.

At settings up to 12 O'clock the Hubble will provide up to +1db of boost, giving you that tiny bit of volume boost at the end of your board. Set it higher than 12 O'clock, and the Hubble will generously provide boost up to +20db, ideal for adding extra chunk to your favorite drive pedals or amp.

Specs:

- Handmade in Athens, Greece
- True Bypass
- 1 Boost control
- Heavy Duty Foot-switch for enable / disable the pedal
- Power supply : regulated 9-12 V DC (center -)
- Max power consumption : 3mA @ 9V DC
- Heavy duty & light weight aluminum box
- Dimensions : 390mm(Width) x 940mm(Depth) x 50mm(Height)
