

# Tremmatic

## Optical Tremolo

Tremmatic is versatile and useful optical tremolo. It starts from vibe sounds to aggressive and hard chopping effect.

With the big range LFO, 3Hz to 13Hz, and the 2 selectable waveforms square & sine, from a dedicated toggle switch, you can reach almost any trem sound!!!

### **Controls:**

- LEVEL: Adjusts the volume of the sound
- DEPTH: Adjusts the amount of the effect on the sound
- SPEED: Adjusts the speed of the tremolo
- Toggle switch for Square & Sine waveform mode.

\*Note: With the DEPTH control set to zero a very colorful and powerful preamp - booster comes up.

SQUARE mode is a more intense type of tremolo with more of an ON/OFF feel to the sound.

SINE mode is a more subtle and discrete type of tremolo. With the DEPTH at 40% and various SPEED settings, it can be used as a univibe style of effect.

### **Specs:**

- Handmade in Athens, Greece
- True Bypass
- 2 waves (sine & square) Optical style tremolo
- Led for speed indication
- 1 Heavy Duty Foot-switch for enable / disable the pedal
